Comprehensive and Powerful Tool to Manage Customer Account Information

Titan's Accounts Receivable module provides a variety of tools for tracking and managing customer account information

Intuitive features coupled with informative reporting are the hallmark of this Accounts Receivable module.

By simply generating invoices directly from delivery tickets, the accounts receivable process starts off swift and accurate. It is followed by the ability to print customer statements in multiple formats, while easily recording and tracking customer collection notes.

Our integration with BASYS, one of the nation's leading credit card processing companies, makes it easy to take credit card payments from within Titan.

Finishing strong, the accounts receivable process ends with user-friendly cash entry and customer inquiry screens.

Comprehensive and powerful, the Accounts Receivable module is a critical process within the Titan Precast Management System.
