TURBO CHARGE YOUR TITAN TRAINING!

Titan 3000 Warp Speed Training Program: Intensive, Focused Training for Your Titan Team

Titan's popular Warp Speed Training program has expanded. Originally developed as an intensive training module for Titan's takeoff systems, we have now expanded our curriculum to include additional Titan modules. Now you can get your team quickly up to speed on Titan's powerful precast management system with our personalized Warp Speed Training online course. We work directly with your team using your data to create an intensive, focused learning experience designed to create efficiencies, save time and build individual skills.

Who's it for?
If you are new to Titan 3000, are migrating your old takeoff system to Titan or want to train new or existing staff on the many features of Titan, Warp Speed Training is for your team.

Focused Training
Warp Speed Training sessions are held from 9 a.m. to 4 p.m. (Eastern) –-focused training via Zoom, with two experienced Titan instructors who will work directly with your data and an unlimited number of your team members. We will provide a recommendation on the number of days depending on the topic/s your company would like to focus on. Training sessions are recorded for your future reference.
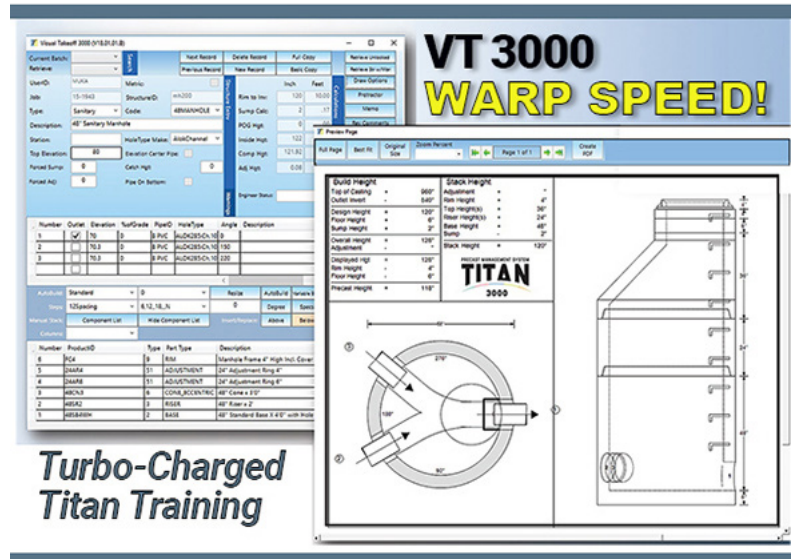

Get Up to Speed – FAST!
Warp Speed Training quickly and efficiently trains your Titan team directly – using your own data on any module in your system, such as VT 3000, Visual Estimator, Project Management, Production Scheduling and Processing, Shipping, Accounting, and more.

Sample Training Scenario
Here's how our Warp Speed Training works, using the Visual Takeoff module as an example. Two instructors work with your data to train users on the set-up required within product maintenance, structure maintenance, pipe maintenance, and enhanced drawings to effectively use VT 3000. As one instructor is training your team using your database, a second instructor will access Titan in your server to update your data setup. This includes matching the product and structure codes and cleaning up your existing data. Then we'll train your team to efficiently manage your takeoffs and track orders with VT 3000.

Pricing
The cost per day is $3,000 for your entire team, with customized training options available.
For more information, or to schedule your Warp Speed Training, contact Tom Reilly (treilly@muka.net) or call us at **(732) 866-8686** for all the details.
